

## printing the colourevolution

Elma Electronic is using the new digital printing system as a cost effective, flexible and fast alternative to other printing techniques.

The new system offers:

- all colours
- print onto different surfaces (steel, alu, etc.)
- easy to read even with small fonts
- from prototype to serie
- short manufacturing time
- high adhesion
- good resistance against solvents and purifiers
- printing area up to 300 x 500 mm

The future looks multi-coloured and future front panels will continue to be individually adapted to both the company and the equipment. Elma – Your Solution Partner – now offers more possibilities to meet these requirements.
