

Si4010 Wireless Automated Control Development Kit

The Si4010 wireless automated control development platform is a flexible platform for comfortably developing software and testing the whole system using the Silicon Laboratories software development IDE. The platform also allows programming of the NVM on chip.

Kit Contains:

- Burning Adapter
- Si4010 Socketed Wireless Automated Control Development Board
- Si4010 SOIC Wireless Automated Control Development Board 434 MHz, PCB Ant.
- Programming Adapter
- (2) 4010 Wireless Automated Control Demo Board without IC
- Key Fob Plastic Case (translucent grey)
- WDS CDROM Set
- (5) Si4010 sample, SOIC package
- USB Cable
- Debug Cable

There are also two boards with SMA connectors available for test measurement purposes, available separately.

- Si4010 SOIC wireless automated control development board 434 MHz
- Si4010 MSOP wireless automated control development board 868 MHz
