

Wireless MCU Si1000DK

We offer a combination of hardware and software to assist with the development of wireless-based embedded applications. The Si1000DK provides everything needed to begin development using our Wireless MCU in your application.

The Si1000 Wireless MCU Development Kit includes:

- Si10xx Motherboard
- Si1000 915 MHz Test Card
- [Si1000 DK Quick-Start Guide](#)
- AC to DC universal power adapter
- USB debug adapter (USB to debug interface)
- 2 USB cables
- CD-ROM; CD content includes the following:
 - Silicon Laboratories [Integrated Development Environment \(IDE\)](#)
 - Source code examples and register definition files
 - Documentation
 - [Si1000 Development Kit User's Guide](#)
 - [AN474: Si10xx Code Examples Application Note](#)
 - [AN474SW: Si10xx Code Examples](#)
- Third Party Tools and Documentation CD

A host PC is required to run the development kit software and communicate with the debug adapter. The PC must meet the following system requirements:

- Windows 2000 or later
- One USB port

The modular nature of the Si1000DK enables you to match any test card to the baseboard.
